

Quick Start Guide for the CoolCopy Series CD stand-alone Duplication System

Thank you for purchasing the CoolCopy Duplication System. This guide will help you be on your way to duplicating discs at a rate you never would have imagined! The CoolCopy CD duplication tower is easy to use and is designed to duplicate multiple discs simultaneously, quickly, and efficiently.

How to set up and use the CoolCopy CD Duplication System

1. First, remove the duplicator and extension cord from the package.
2. Attach the power cord to the CoolCopy duplication system and plug the extension cord into an electrical outlet.
3. Be sure to set up the tower on a sturdy, horizontal platform, such as a floor or a desk.
4. Once the system is plugged in, press the power button located on the front panel of the tower in the lower right corner. You should notice that the green light will turn on and the fans will start making noise.
5. The CoolCopy CD Duplication System will only duplicate CDs, not DVDs, so make sure the disc you want to duplicate is of the right medium.
6. Insert the source CD, or rather, the CD that you wish to duplicate, into the CD-ROM drive located in the highest slot of the tower.
7. To duplicate the source CD, all you have to do is place blank CD±R discs into any other drive and it will automatically begin to duplicate the source CD by itself.
8. When the CoolCopy Duplication System finishes duplicating a disc, the CD-ROM drive will automatically eject the duplicated CD and all you have to do is replace the copied disc with another blank CD±R to continue the process. It is that easy!
9. Please note that the source CD will NOT eject itself.
10. When finished, be sure to take the discs out of the tower and press the power button to turn off the tower.
